The Census Date, — June has been found to be the most suitable month for the taking of the census in this country. In the 1946 Census the precise hour of reckoning was midnight, standard time, on the night of May 31 to June 1. Everyone born before that hour and everyone dying after it was counted in the population.

The "De Jure" Melhod. — The Canadian Cennus, like the United States Census but unlike some European censuses, is taken on what is known as the de jure principal. This means that each individual is senserated as belonging to the locality in which he or she is regularly benedicide, as distinguished to the locality where found on the census date.

La date du recensement.— Le nois de juin a été choisi comme étant le plus propice au recensement dans ce pays. Lors du recensement de 1946, l'heure précise du début du dénombrement était manut, durant la nuit du 31 has en 1er juin. Toute personne née avant cette heure et toute personne morte après devait être dénombrée.

Census Schedules. - Four schedules were employed during the 1946 Census to record the information gathered by the en umerators - one for Population, two for Agriculture, and one for Housing. The Agriculture and Housing Schedules are described in detail in the volumes relating to those subjects. The tables of this volume, as well as those of Volume II (Earmings and Employment, Occupations and Industries) and some of the tables of Volume III (Dwellings, Households and Families) were derived from the Population Schedule. This schedule contained thirty-three columns for recording the following information: name, address, sex, age, marital status, birthplace, tionality, mother tongue, education, war service, place of fe-sidence on June 1, 1941, relationship to the head of household. occupation and industry, industrial status, and various questions relating to wage-earners, such as employment and earnings, Certain information relating to the dwelling was also included on this schedule as number of rooms, value and rent, etc. A copy of this schedule is reproduced in Appendix "A" of this volume.

In addition to the four main schedules just referred to, enumerators had, on occasion, to make use of other forms such vaient sur le questionnaire de la population, où fl avait laissé une ligne en blanc à cette fin, et attribuait ainsi cette personne au ménage auquel elle appartenait.

Questionnaires de recensement - Il a falla quatre ques tionnaires, au recensement de 1946, pour consigner les renseignements que devaient obtenir les agents recenseurs: un sur la population, deux sur l'agriculture et un sur le logement. Les questionnaires de l'agriculture et du logement sont décrits en détail dans les volumes qui traitent de ces sujets. Les en detan dans seo romanes du wassens de ceo adjeus. Certains renseignements relatifs au logement étaient aussi consignés, tels que le nombre de pièces, la valeur, le loyer, etc. Une copie de ce questionnaire est reproduite à l'appendice "A" du présent valume.

En plus des quatre questionnaires principaux ci-dessus mentionnés, les recenseurs devaient, à l'occasion, recourir à as the Individual Population Form, the Closed Dwelling Card, and the Temporary Resident Household Card, which have been described in previous sections.

This assignment in the case of "not given" information was extended in the 1946 Census to include not only the cate cory of age, but also other subjects where the number of "not given" cases was small, such as marital status, birtaplace, citizenship, mother tongue, and years of schooling. For each category a carefully devised plan was followed in order that the distribution of the assigned cases would, in the aggregate. closely approximate the probable distribution that would have resulted if the information had been recorded on the schedule, This meant that the maximum use was made of other informa tion on the schedule, as well as the laws of probability, in estimating a value for each "not myon" case. For instan if a person whose age was not given was recorded in another column, as a student, he would not be assigned an age incom-natible with his status as "student". In other words, the assignments are not blind suesses, but informed estimates which take all factors into consideration. Celles-ci ont été décrites dans le paragraphe précédent.

Revision sur place. - Une expérience, tentée pour l première fois lors du recensement national de 1941, a été répêtée lors du recensement de 1946. Il s'agit d'une vérification effective sur place du travail de l'agent recenseur durant le dénombrement même. Cette vérification a été faite dans les plus grands centres des trois provinces par un personnel spécial de fonctionnaires et de surveillants du Bureau fédéral de la statistique. L'arrivée de ce personnel devait coîncider avec le début du dénombrement et des bureaux furent aménagés dans chaque ville. Chaque recenseur de ces centres était interviewé à un certain moment durant les prenners jours de travail et pouvait ainsi exposer ses difficultés et ses problèmes. Ceux dont les questionnaires contennient de nombreuses erreurs étalent rappelés pour un deuxième entretien-Ce personnel du Bureau était en permanence à la disposition des recenseurs pour avis ou consultation. Une fois le dénombrement terminé certains agents recenseurs ont été retenus pour deux ou trois semaines en vue d'aider le personnel d'Ottawa dans son travail de revision.

DEFINITIONS OF TERMS

Rural and Urban Population. — For census purposes the rural population is the entire population living outside of the boundaries of incorporated cities, towns, or villages. This population may reside in organized rural municipalities, disticts, etc., or in areas which are unorganized.

The urban population is the population residing within the boundaries of incorponated cities, towns, or villages. Differences in the acts of incorporation, however, make it impossible to ludge the relative degrees of urbanization smong powdness simply on the basis of the available flucture. A summary of the major provisions of these acts for the Provinces of Maniblab, Sackstchewam, and Alberts at the time of the 1946 Census may more abstract.

DEFINITION DES TERMES

Population rurale el population unbaine. — Pour les fins du recensement, la population rurale comprend toute la population qui vit en debora des limites des cités, villes ou villages érigéa en corporations. Cette population peut babiter les municipalités, districts, etc., ruraux organisés ou des régions qui ne sont aus orrasinées.

La popilation urbaine est la population qui babbe dans les limites des cités, villes ou villages érigés en copportions. Toutefois, en misce de la variation entre les lois d'incorporation, il est impossible, à la lumére des neuts chiffres disponibles, de juger du deuje relatif d'urbainsation des provinces. Un résuné des dispositions principales de ces lois de Manioba, de la Saskatchewan et de l'Alberta nu moment du recensement, de 1946, sera utile:

Manitob

Age. — The instructions to enumerators specified that the age to be reported for every person one year old or more was to be in completed years at the last birthday. In the case of infants under one year, the entry was to be expressed in completed months as twelfths of a year. A fitteen-day-old child would thus be reported as 0/12, and in the case of one who was two months and ten days old, the entry would be 2/12.

Martial Status, - Each person enumerated was placed, acording to he martial status, into one of four categories, viz., single, married, widowed, or diverced. All figures under "maried" include persons who, at the time of the cessus, were separated, permanently or otherwise, for domestic or economic reasons.

Burbajace. — For persons born in Canada, enumerations were instructed to either the province of britz. For persons born in the Britzsh lates the perticular part was indicated, e.g., program, saur, control of the person of the Britzsh lates and person of the person was born in Northern or Southern Ireland. DESCRIPTIONS OF CENSUS DIVISIONS

MANITORA

Since there are no fixed political divisions in Manitoba corresponding to the counties of Eastern Canada, this province has been divided for statistical purposes into census divisions and subdivisions. These census divisions have been so laid out that as population increases, they may be subdivided without destroying the means of comparing the variations in the population disclosed by the censuses.

Areas with fixed boundaries are used as a basis for the compilation of the census rather than electoral districts, since the areas of the electoral districts are subject to change after endistriction, thus making it impossible to compare one ceasus with another for areas smaller than a province.

The census divisions in this province are constituted as follows:

Division No. 1 comprises the municipalities of Birch River(1), Hanover(2), La Broquerie(3), Piney(4), Sée. Anne (5), Sprague(6), Stuartburn(7), Taché(8); Unorganized parts (9); Indian Reserves.

DESCRIPTION DES DIVISIONS DE RECENSEMENT

MANITOBA

Comme il ny a pas au Manitoba de divisions politiques lines qui correspondent aux contes de l'Est di Canadia, cette province a été divisée, pour fins statistiques, en divisions et subdivisions de recensement. Cest divisions de recensement ont été organisées de telle façon que, à mesure que la population ausmente elles puissent être subdivisées saus détruire les moyens de comparer les varistions de la population révefiées pre les reconsements.

Les régions dont les limites sont fixes servent de base aux compilations de recensement plubit que les distribués électoraux parce que l'étendue de ceux-ci reste sujeté à changement syrée chaque remaimement de la carte électorale, ce qui rend toute comparaison impossible entre un recense mentet un autre pour les régions plus petites qu'une province.
